

TOLL PROCESSING

Choosing the right toll processing partner can make all the difference to your business. When you choose Hosokawa Micron Powders you can be assured your high quality standards are maintained and costs effectively managed but also that you have the in-built flexibility to reliably satisfy the fluctuating demands in today's challenging marketplace.

Hosokawa Micron Powders is a specialist toll processing partner, offering a range of toll processing services that can give you all the above plus other significant production advantages that come directly from their unique and specialist processing heritage.

The Hosokawa Micron Advantage

You can process your materials professionally without investing in your own processing and storage facilities; introduce new products without risk; overcome temporary capacity shortages and produce niche products economically.

PLUS all our customers benefit from:

- Access to more than 20 individual processing suites
- Comprehensive in-house analytical and test facility support
- Extensive processing know-how of Hosokawa's engineers
- Seamless scale-up to increased production capacity
- Solutions tailored specifically to meet your needs

Extended Toll Processing Capability

With modern production facilities in United Kingdom, Germany and Netherlands, Hosokawa Micron Powders can offer the most diverse range of powder processing technologies on the market whether to meet your requirements for unique one-off projects or regular, repeat processing activities – all supported by a network of powder and particle processing expertise that is on hand to create further competitive advantages for your business.

Benefits of Outsourcing

- Supplement your own production capacity limitations
- R&D projects
- Market development of new products

Hosokawa Micron Powders offer a unique toll processing service supported by the extensive knowledge of our engineers and powder and particle processing experience and expertise that comes from being an integral part of the Hosokawa Micron Group of companies; world leaders in powder processing technology and innovation.

Individual toll processing solutions are designed to meet your present and evolving toll processing needs including handling multi-tonne lots or ultra small batch processing; production of materials requiring processing in a contained environment; food products processed within BRC accredited suites and micronisation and classification of materials to sub-micron size.

Industry Applications

- Food
- Chemical
- Mineral
- Plastic
- Metal

Toll Processing Technologies

Manufacturers can select from a range of processing technologies including:

- Size reduction
- Granulation
- Mixing
- Coating
- Compaction
- Pack-off into FIBCs, sacks, drums or boxes
- Warehouse storage and delivery directly to customers

Quality Assurance

From initial consultation for trial work, choice and design of equipment, product control specifications to cleaning regimes, Hosokawa Micron is committed to meeting individual customer requirements for optimum quality assurance. Full batch production documentation and product quality guarantees supported by validation certificates, secure packaging and batch coding mean customers can be confident in outsourcing even critical or sensitive product production.

Order-specific packing and tracked intermediate storage and delivery completes our quality assured processing and logistics solution.
